

New Referencing Style in *Mineralogia*

Introduction

Volume 40 of *Mineralogia* brings a change in the referencing style to comply with MetaPress technology that our publishing company Versita uses for making the electronic version of *Mineralogia*. We realize that APA (American Psychological Association) style, recommended by MetaPress, differs from the one used since the first volume of *Mineralogia Polonica* but we hope that this change will add a lot of value to your publications, being actively linked to other references in online databases.

In this document you will find instructions on citing journal articles, books, conference papers, theses, webpages and other sources of information, according to the APA style with relevant examples. In many reference management applications it is possible to set APA style as a default one and copy the formatted results directly to your text. Such computer programmes will facilitate preparation of your manuscript for *Mineralogia*, and we recommend using one of the free or commercial ones.

Please provide all the required elements in the references to your paper. Please pay particular attention to spelling, capitalization and punctuation. Each source you cite in the paper must appear in your reference list; likewise, each entry in the reference list must be cited in your text. Accuracy and completeness of references are the responsibilities of the author. Before submitting your article, please ensure you have checked your paper for any relevant references you may have missed.

Thank you for adhering to the new referencing style in *Mineralogia*.
